## Investment objective

The Fund's investment objective is to seek long-term growth of capital.

The Fund invests primarily in companies both in developed markets - excluding the United States ("international value portfolio") - and in emerging markets ("emerging markets portfolio"). The Investment Adviser allocates substantially all of the Fund's assets between the international value portfolio and the emerging markets portfolio using a proprietary asset allocation model.

## Fund features

- The international value portfolio uses bottom-up stock selection based on fundamental research, focusing on mid to large cap value stocks in developed international markets.
- The emerging markets portfolio uses an actively managed tracking-error oriented quantitative strategy, combining bottom-up and top-down factors in security selection.

The performance data quoted herein represents past performance. Past performance is not a guarantee of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth less than their original cost, and current performance may be lower than the performance quoted. For performance data current to the most recent month end, please call 1.866.947.7000.

Returns greater than one year are annualized. Total returns assume reinvestment of dividends and capital gains distributions at net asset value when paid. Investment performance reflects contractual fee waivers. In the absence of such fee waivers, total return would be reduced. Investor Class shares charge up to a 0.25% annual shareholder service fee. High relative or absolute performance may not be repeatable.

**Market commentary**

Equity prices continued to decline in the second quarter as accelerated central bank tightening and recession fears weighed on the outlook for economic growth. The top performing markets in our investable universe were China, Hong Kong, the Czech Republic, Portugal, and Kuwait. The worst performing markets were Peru, Colombia, Poland, Hungary, and Brazil. The best performing sectors in the MSCI ACWI ex US Index ("Index") were energy, consumer staples, and consumer discretionary. The worst performing sectors were information technology, materials, and industrials. Currency proved a headwind as major currencies declined against the US dollar.

The Fund outperformed the Index during the quarter, due primarily to stock selection. Fund holdings in the banks, semiconductors & semi equipment, and household & personal products industry groups, as well as an overweight position in the pharmaceuticals & biotechnology and energy industry groups, contributed to relative performance. Holdings in the transportation, utilities, retailing, and insurance industry groups, along with an underweight position in the telecommunication services industry group, offset some of the outperformance compared to the Index. The top contributor to return was integrated oil & gas company, TotalEnergies SE (France). Other notable contributors included polysilicon manufacturer, Daqo New Energy - ADR (China), retail bank, CaixaBank SA (Spain), pharmaceutical giant, Sanofi (France), and solar panel manufacturer, Tongwei Co (China). The largest detractor was jet engine manufacturer, Rolls-Royce Holdings Plc (United Kingdom). Additional notable detractors included electric, gas & renewables power generation & distribution company, Enel SpA (Italy), integrated circuit manufacturer, Taiwan Semiconductor Manufacturing Co., Ltd. - ADR (Taiwan), electronic equipment manufacturer, Samsung Electronics Co., Ltd. (South Korea), and business software & services provider, SAP SE (Germany).

**Equity allocation model update**

We use a proprietary quantitative equity allocation model that assists the portfolio managers in determining the weight of emerging versus developed markets in the Fund. Our allocation relative to the weight of emerging markets in the Index is currently underweight. We identify five primary factors as most indicative of the ideal allocation target: valuation, quality, earnings growth, macroeconomic, and risk aversion. Valuation is currently positive for emerging markets in our model. Our quality metrics, which include such measures as profit margins and return on equity, are negative. Our earnings growth factor is negative, and our macroeconomic factor is neutral for emerging markets. Lastly, our risk aversion factor is positive in our model.

**Risk Disclosures:** Mutual fund investing involves risk, including possible loss of principal. In addition to the normal risks associated with equity investing, international investing may involve risk of capital loss from unfavorable fluctuations in currency values, from differences in generally accepted accounting principles, or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors, as well as increased volatility and lower trading volume. Current and future holdings are subject to risk. Diversification does not protect against market loss. There is no guarantee that securities mentioned will remain in or out of the Fund.

The market commentary expresses the portfolio managers' views as of the date of this report and should not be relied on as research or investment advice regarding any stock.
