

This contains information about the general risks of Causeway's investment strategies. As with any investment strategy, there can be no guarantee that a strategy will meet its goals or that the strategy's performance will be positive for any period of time. The principal risks of Causeway's strategies' are listed below:

1. Market and Selection Risk

Market risk is the risk that markets will go down in value. Global economies are increasingly interconnected, and political, economic and other conditions and events (including, but not limited to, natural disasters, pandemics, epidemics, and social unrest) in one country or region might adversely impact a different country or region. Furthermore, the occurrence of severe weather or geological events, fires, floods, earthquakes, climate change or other natural or man-made disasters, outbreaks of disease, epidemics and pandemics, malicious acts, cyber-attacks or terrorist acts, among other events, could adversely impact the performance of client portfolios. These events may result in, among other consequences, closing borders, exchange closures, health screenings, healthcare service delays, quarantines, cancellations, supply chain disruptions, lower consumer demand, market volatility and general uncertainty. These events could adversely impact issuers, markets and economies over the short- and long-term, including in ways that cannot necessarily be foreseen. Clients could be negatively impacted if the value of a portfolio holding were harmed by political or economic conditions or events. Moreover, negative political and economic conditions and events could disrupt the processes necessary for the management of clients' portfolios. For example, global financial markets have experienced and may continue to experience significant volatility resulting from the spread of COVID-19. The COVID-19 pandemic has resulted in travel and border restrictions, quarantines, supply chain disruptions, lower consumer demand and general market uncertainty. The effects of COVID-19, including new variants, have and may continue to adversely affect the global economy, the economies of certain nations and individual issuers, all of which may negatively impact clients' portfolios. Similar consequences could arise as a result of the spread of other infectious diseases.

On January 31, 2020, the United Kingdom officially withdrew from the EU, and a transition period applied until December 31, 2020. On December 30, 2020, the EU and United Kingdom signed the EU-United Kingdom Trade and Cooperation Agreement (the "TCA"), an agreement that governs certain aspects of the EU's and the United Kingdom's relationship following the end of the transition period. Notwithstanding the TCA, aspects of the relationship between the United Kingdom and EU remain unresolved and subject to further negotiation and agreement. There is uncertainty as to the United Kingdom's post-transition framework, and in particular as to the arrangements which will apply to its relationships with the EU and with other countries, which may not be resolved for some time.

The full details and consequences of Brexit remain unclear. Clients should be aware that events related to Brexit may introduce potentially significant uncertainties and instabilities in the financial markets, as well as potentially lower economic growth, in the United Kingdom, Europe and globally. Brexit could also lead to legal uncertainty and politically divergent national laws and regulations while the new relationship between the United Kingdom and EU is further defined and the United Kingdom determines which EU laws to

replace or replicate. Depreciation of the euro and/or British pound sterling in relation to the U.S. dollar following Brexit could adversely affect client investments denominated in the euro or British pound sterling, regardless of the performance of the investment. Furthermore, client portfolios could be adversely affected if one or more countries leave the euro currency.

In addition, exchanges and securities markets may close early, close late or issue trading halts on specific securities, which may result in, among other things, an account being unable to buy or sell certain securities or financial instruments at an advantageous time or accurately price its portfolio investments.

Selection risk is the risk that the investments that a strategy's portfolio managers select will underperform the market or strategies managed by other investment managers with similar investment objectives and investment strategies. Causeway's use of quantitative screens and techniques may be adversely affected if it relies on erroneous or outdated data.

2. *Management Risk*

Causeway's opinion about the intrinsic worth of a company or security may be incorrect; Causeway may not make timely purchases or sales of securities or changes in exposures for clients; a client's investment objective may not be achieved; or the market may continue to undervalue securities holdings or exposures, or overvalue short exposures. In addition, Causeway may not be able to dispose of certain securities holdings or exposures in a timely manner. Certain securities or other instruments in which an account seeks to invest may not be available in the quantities desired. In addition, regulatory restrictions, policies, and procedures to manage actual or potential conflicts of interest, or other considerations may cause Causeway to restrict or prohibit participation in certain investments.

3. *Issuer-Specific Risk*

The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole due to, for example: a reason directly related to the issuer; management performance; financial leverage; reduced demand for the issuer's goods or services; the historical and prospective earnings of the issuer; or the value of the issuer's assets. In particular, concentrated strategies may hold a smaller number of holdings, subjecting accounts using these strategies to increased issuer risk, including the risk that the value of a security may decline.

4. *Value Stock Risk*

Value stocks are subject to the risks that their intrinsic value may never be realized by the market and that their prices may go down. Causeway's value discipline sometimes prevents or limits investments in stocks that are in a strategy's benchmark index.

5. *Dividend-Paying Stock Risk*

Dividend-paying stocks may underperform non-dividend paying stocks (and the stock market as a whole) over any period of time. The prices of dividend-paying stocks may decline as interest rates increase. In addition, issuers of dividend-paying stocks typically have discretion to defer or stop paying dividends. If the dividend-paying stocks held by an account reduce or stop paying dividends, the account's ability to generate income may be adversely affected.

6. *Foreign and Emerging Markets Risk*

Foreign security investment involves special risks not present in U.S. investments that can increase the chances that an account will lose money. For example, the value of an account's securities may be affected by social, political and economic developments and U.S. and foreign laws relating to foreign investment. Further, because accounts invest in securities denominated in foreign currencies, accounts' securities may go down in value depending on foreign exchange rates. Other risks include trading, settlement, custodial, and other operational risks; withholding or other taxes; and the less stringent investor protection and disclosure standards of some foreign markets. All of these factors can make foreign securities less liquid, more volatile, and harder to value than U.S. securities. These risks are higher for emerging markets and frontier market investments, which can be subject to greater social, economic, regulatory and political uncertainties. These risks are also higher for investments in smaller and medium capitalization companies. These risks, and other risks of investing in foreign securities, are explained further below.

- The economies of some foreign markets often do not compare favorably with that of the U.S. with respect to such issues as growth of gross domestic product, reinvestment of capital, resources, and balance of payments positions. Certain foreign economies may rely heavily on particular industries or foreign capital. For example, a decrease in the price of oil may negatively affect the economies of countries that rely on the energy industry. They may be more vulnerable to adverse diplomatic developments, the imposition of economic sanctions against a country, changes in international trading patterns, trade barriers and other protectionist or retaliatory measures.
- Governmental actions – such as the imposition of capital controls, nationalization of companies or industries, expropriation of assets or the imposition of punitive taxes – may adversely affect investments in foreign markets.
- The governments of certain countries may prohibit or substantially restrict foreign investing in their capital markets or in certain industries. In addition, the U.S. government may restrict U.S. investors, including Causeway and its clients, from investing in certain foreign issuers. Any of these restrictions could severely affect security prices; impair an account's ability to purchase or sell foreign securities or transfer its assets or income back to the U.S.; result in forced selling of securities or an inability to participate in an investment Causeway otherwise believes is attractive; or otherwise adversely affect an account's operations.

- Other foreign market risks include foreign exchange controls, difficulties in pricing securities, defaults on foreign government securities, difficulties in enforcing favorable legal judgments in foreign courts, and political and social instability. Legal remedies available to investors in certain foreign countries are less extensive than those available to investors in the U.S. or other foreign countries. Many foreign governments supervise and regulate stock exchanges, brokers and the sale of securities less than the U.S. government does. Foreign corporate governance may not be as robust as in more developed countries. As a result, protections for minority investors may not be strong, which could affect security prices.
- Accounting standards in other countries are not necessarily the same as in the U.S. If the accounting standards in another country do not require as much disclosure or detail as U.S. accounting standards, it may be harder for the portfolio managers to completely and accurately determine a company's financial condition or find reliable and current data to process using quantitative techniques.
- Because there are usually fewer investors on foreign exchanges and smaller numbers of shares traded each day, it may be difficult for an account to buy and sell securities on those exchanges. In addition, prices of foreign securities may fluctuate more than prices of securities traded in the U.S.
- Foreign markets may have different clearance and settlement procedures. In certain markets, settlements may not keep pace with the volume of securities transactions. If this occurs, settlement may be delayed and the assets in a client's account may be uninvested and may not be earning returns. An account also may miss investment opportunities or not be able to sell an investment because of these delays.
- If permitted by a client, Causeway may (but is not obligated to) cause an account to enter into forward currency contracts or swaps to purchase and sell securities for the purpose of increasing or decreasing exposure to foreign currency fluctuations from one country to another, or from or to the Eurozone region, in the case of the Euro. There can be no assurance that such instruments will be effective as hedges against currency fluctuations or as speculative investments. Moreover, these currency contracts or swaps are derivatives (see "Derivatives Risk" below).
- Changes in foreign currency exchange rates will affect the value of an account's foreign holdings. Further, companies in foreign countries may conduct business or issue debt denominated in currencies other than their domestic currencies, creating additional risk if there is any disruption, abrupt change in the currency markets, or illiquidity in the trading of such currencies.
- The costs of foreign securities transactions tend to be higher than those of U.S. transactions.
- International trade barriers or economic sanctions against foreign countries may adversely affect an account's foreign holdings.

- The performance of some of Causeway’s strategies, in particular the emerging markets and China equity strategies, may be affected by the social, political, and economic conditions within China. China’s securities markets have less regulation and are substantially smaller, less liquid and more volatile than the securities markets of more developed countries, and hence are more susceptible to manipulation, insider trading, and other market abuses. As with all transition countries, China’s ability to develop and sustain a credible legal, regulatory, monetary and socioeconomic system could influence the course of outside investment. China has yet to develop comprehensive securities, corporate, or commercial laws; its market is relatively new and undeveloped; and the rate of growth of its economy is slowing. Government policies have recently contributed to economic growth and prosperity in China, but such policies could be altered or discontinued at any time, and without notice. Changes in government policy and slower economic growth may restrict or adversely affect an account’s investments. In addition, certain accounts may obtain exposure to the China A-Share market through participation notes, warrants or similar corporate obligations, which are derivative instruments that can be volatile and involve special risks including counterparty risk, liquidity risk, and basis risk. Alternatively, certain accounts may directly invest in China A-Shares listed and traded on the Shanghai Stock Exchange or Shenzhen Stock Exchange through the Shanghai-Hong Kong or Shenzhen – Hong Kong Stock Connect links (“Stock Connect”). Trading through Stock Connect is subject to a number of risks including, among others, trading, clearance and settlement risks, currency exchange risks, political and economic instability, inflation, confiscatory taxation, nationalization, expropriation, Chinese securities market volatility, less reliable financial information, differences in accounting, auditing, and financial standards and requirements from those applicable to U.S. issuers, and uncertainty of implementation of existing law in the People’s Republic of China. Further developments are likely and there can be no assurance of Stock Connect’s continued existence or whether future developments regarding the program may restrict or adversely affect an account’s investments or returns. In addition, securities of certain Chinese issuers are, or may in the future become, restricted, and a client account may be forced to sell these restricted securities and incur a loss as a result.
- Certain accounts may gain exposure to certain operating companies in China through legal structures known as variable interest entities (“VIEs”). In China, ownership of companies in certain sectors by non-Chinese individuals and entities (including U.S. persons and entities) is prohibited. To facilitate indirect non-Chinese investment, many China-based operating companies have created VIE structures. In a VIE structure, a China-based operating company establishes an entity outside of China that enters into service and other contracts with the China-based operating company. Shares of the entities established outside of China are often listed and traded on an exchange. Non-Chinese investors hold equity interests in the entities established outside of China rather than directly in the China-based operating companies. This arrangement allows U.S. investors to obtain economic exposure to the China-based operating company through contractual means rather than through formal equity ownership. An investment in a VIE structure subjects certain accounts to the risks associated with the underlying China-based operating company. In addition, certain accounts may be exposed to certain associated risks, including the risks that: the Chinese government could subject the China-based operating company to penalties, revocation of business and operating

licenses or forfeiture of ownership interests; the Chinese government may outlaw the VIE structure, which could cause an uncertain negative impact to existing investors in the VIE structure; if the contracts underlying the VIE structure are not honored by the China-based operating company or if there is otherwise a dispute, the contracts may not be enforced by Chinese courts; and shareholders of the China-based operating company may leverage the VIE structure to their benefit and to the detriment of the investors in the VIE structure. If any of these actions were to occur, the market value of investments in VIEs would likely fall, causing investment losses, which could be substantial.

7. *Small and Medium Capitalization Companies Risk*

The values of securities of smaller and medium capitalization companies, which may be less well-known companies, can be more sensitive to, and react differently to, company, political, market, and economic developments than the market as a whole and other types of securities. Smaller and medium capitalization companies can have more limited product lines, markets, growth prospects, depth of management, and financial resources, and these companies may have shorter operating histories and less access to financing, creating additional risk. Smaller and medium capitalization companies in countries with less-liquid currencies may have difficulties in financing and conducting their business. Further, smaller and medium capitalization companies may be particularly affected by interest rate increases, as they may find it more difficult to borrow money to continue or expand operations, or may have difficulty in repaying any loans that have floating rates. Because of these and other risks, securities of smaller and medium capitalization companies tend to be more volatile and less liquid than securities of larger capitalization companies. During some periods, securities of smaller and medium capitalization companies, as asset classes, have underperformed the securities of larger capitalization companies.
